EDUCATION

Degree	Institute/Board	CGPA/Percentage	Year
Bachelor of Technology	Uttaranchal University, Dehradun	8.15/10 (Current)	2024-Present

Technical Skills

Machine Learning / Data Science: Scikit-learn, TensorFlow, NumPy, Pandas, Matplotlib, Plotly
AI / LLM Integration: OpenAI API, Prompt Engineering (zero-shot, one-shot, few-shot), Generative AI tools, NLP, LLM-powered application development , Hugging Face
Languages: Python, JavaScript, C/C++, SQL
Web & API Development: Flask, Fast API , REST APIs, Express , Node.js, HTML5, CSS , Oauth , MongoDB
Tools & Platforms: Git, GitHub, Jupyter Notebook, Google Colab, Anaconda Navigator, Linux
Core Fundamentals: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

PROJECTS

Live Code — GitHub

July 2025

- Developed a collaborative web IDE utilizing React, Node.js, and the Monaco Editor
- Engineered real-time code synchronization using WebSockets and CRDT algorithms.
- Created interactive visualizations to analyze financial patterns and model predictions.
- Integrated WebRTC for low-latency, peer-to-peer voice collaboration.
- Implemented Git-like versioning to track coding history and restore project snapshots

Music Recommendation System using KNN — GitHub

July 2025

- Developed a KNN-based music recommendation system using a Spotify dataset containing over 1 million songs, cleaning and preprocessing data by handling missing values, normalizing audio features (tempo, energy, danceability), and encoding categorical genre data.
- Generated similarity-based recommendations by analyzing song features and user-selected inputs, validating recommendation quality via [precision@10 / held-out comparison] and achieving [92]% [metric].
- Created interactive visualizations to analyze song feature patterns and validate model predictions.
- Built a web interface using Flask for real-time song recommendations, exposed through a REST API.
- Technologies used: Scikit-learn (KNN), Pandas, NumPy, Flask, HTML5, and CSS.

Jagruk Swadesh (SIH) — GitHub — Live Demo

September 2025

- Built the central API gateway using Node.js, Express, and MongoDB to manage client authentication, user sessions, and secure reverse-proxy routing.
- Implemented asynchronous request routing connecting the React frontend to a decoupled Python FastAPI AI microservice hosting the LangChain RAG pipeline.
- Designed RESTful endpoints to process multimodal voice/text queries, streaming speech-to-text (Whisper) and Edge-TTS responses with sub-second latency.
- Handled request payload validation, error propagation, and CORS policies to maintain reliable cross-service communication between Node.js and FastAPI.

LEADERSHIP & ACTIVITIES

Google Student Ambassador

View Certificate

- Promoted Gemini AI and Google's latest AI tools within student communities.
- Conducted outreach sessions to introduce students to AI-powered image and video creation features.
- Organized awareness activities and helped students explore practical uses of generative AI.

CERTIFICATES

Python Programming Certificate

June 2025

Udemy

View Certificate

- Comprehensive Python programming course covering fundamentals to advanced concepts
- Skills: Python, OOP, Data Structures, File Handling

Prompt Engineering & Programming with OpenAI

July 2024

Columbia+

View Certificate

- Designed effective prompts using LLM fundamentals and various prompting techniques (zero-shot, one-shot, few-shot) to generate diverse outputs
- Built applications using OpenAI API to develop text, image, and audio-based features programmatically
